MEDICAL SIMULATION CENTER REGULATIONS

1. These Regulations set out the rules for using the Medical Simulation Center (MSC). Entry to the MSC premises constitutes confirmation that the user has read and accepted these Regulations.
2. Outerwear and personal belongings must be left in the cloakroom located on level –1 of the building.
3. The designated waiting area for all students is located on level 2. Instructors will indicate the rooms in which classes are scheduled to take place on a given day.
4. Due to the building's access control system, strict punctuality is required. Late arrival may result in refusal of entry to classes.
5. Only beverages in tightly sealed bottles or thermal mugs are permitted. Beverages may be consumed exclusively in debriefing rooms and in areas where no simulation equipment is present. A publicly accessible meal preparation area is located on the ground floor.

During classes at the MSC:

1. Students are required to wear medical attire appropriate to their field of study. Clean, dedicated footwear and medical clothing (scrubs, lab coats, emergency medical services uniforms, or gowns) are mandatory.
2. Prior to the start of each simulation, all jewelry that could cause damage to simulators or training devices must be removed, and protective gloves available in the room must be worn.
3. Simulators, training devices, and other equipment must not be switched on or off, moved, or adjusted without the instructor's permission.
4. The use of pens, markers (except on whiteboards), or any other items that may damage the equipment is prohibited in simulation rooms.
5. Medical simulations form an integral part of the educational process and are conducted in a safe learning environment. Sharing or disseminating information regarding the course of simulations, participants' behavior, or learning outcomes outside the classroom is prohibited. Photographing or recording sessions for personal use is permitted only with the instructor's prior consent.
6. High-fidelity simulation rooms are subject to continuous video monitoring. During simulation sessions, instructors may observe the rooms via live video feed. Recorded video material may be used solely for educational purposes, in particular for debriefing. Recordings are retained for 14 days following the completion of classes and are then permanently deleted.
7. Violation of the regulations will result in disciplinary proceedings.
